Pre-questionnaire – Computational Notebook 1

(completed on LMS, digital format)

- Have you previously taken a course in statistics? If so, which one(s)? (radio buttons)
  - High school statistics
  - AP statistics
  - College statistics
  - Other: _____
  - None

- What concepts from statistics you think will be most useful for your career?

- In your own words, define the concept of population & provide a concrete example.

- In your own words, define the concept of sample & provide a concrete example.

- How would you define 'probability'?

- How often have you used MATLAB before this course? (radio buttons)
  - Never
  - Rarely
  - Occasionally
  - Frequently
  - Very frequently

- Rate your confidence in the following (1 lowest to 5 highest):

	1	2	3	4	5
I can distinguish between a sample and a population					
I can identify outcomes in a sample space					
I can calculate simple probabilities					
I can use MATLAB to solve simple operations					
I am confident in my statistics background					

Post-questionnaire – Computational Notebook 1

(completed on LMS, digital format)

- In your own words, explain the difference between a sample and a population.
- Provide an example of a random experiment.
- How would you define probability after completing this notebook?
- What methods did you learn or practice for computing probabilities in a sample space?
- Which concept(s) became clearer after using the notebook?
  (multiple choice)
  - Population
  - Sample
  - Random experiment
  - Sample space
  - Probability
  - MATLAB usage

- Rate your confidence in the following (1 lowest to 5 highest):

	1	2	3	4	5
I can distinguish between a sample and a population					
I can identify outcomes in a sample space					
I can calculate simple probabilities					
I can use MATLAB to solve simple operations					
I am confident in my statistics background					

- What aspects of this notebook were most helpful for your learning?
- What aspects of this notebook were least helpful or confusing?
- Compared to traditional lectures, what aspects of notebook-based learning do you find most engaging?
- How much time did you spend working through the notebook?
  (radial buttons)
  - < 15 min
  - 15-30 min
  - 30-45 min
  - 45-60 min
  - > 60 min

- Notebook Evaluation (1 - strongly disagree to 5 - strongly agree):

	1	2	3	4	5
The notebook helped me review key statistics concepts					
The notebook improved my understanding of probability					
The notebook improved my understanding of sample and population					
The MATLAB code helped me connect theory and practice					
The notebook was easy to follow					
I would like similar notebooks for future topics
